

# Rose Electronics

Rose Electronics, KVM (Keyboard, Video & Mouse) switch range, covers a vast array of applications from simple 2 port SOHO products to large multi-platform corporate matrix solutions incorporating KVM over IP and Cat 5 extension.

In fact if you manage or access more than one server, a KVM switch can provide a number of features and benefits, for example:

**Save Space** – With fewer Monitors, Keyboards and Mice needed to control PC's, Laptops or Servers, a Rose KVM solution can release up to 35% more desk space and can free up to a staggering 60% of space normally occupied with conventional server/comms control scenarios.

**Save Time** – Fewer points of access means less time is needed to assess and troubleshoot. Rose's advanced hotkey switching enables seamless connectivity at the touch of a button saving valuable engineer/access time.

**Save Money** – Less hardware, space, electricity, cooling, system management and time is needed with a Rose solution. All these factors equate to a MASSIVE!!!! annual saving on the overhead of your IT infrastructure.

**Improve Security** – Password protection via the KVM device provides easily implemented security across a number of servers.

## The Vista Range

- Single user KVM switch family
- Vista-mini has 350 Mhz video and stereo audio
- 2 port to 8 port
- 350 Mhz bandwidth
- Optional OSD, Apple, and audio support

## Ultralink Range

- IP enables any existing KVM system
- 128 bit SSL encrypted login
- Linux O/S
- Fully adjustable video control
- Easy to install and operate
- Free Software

## Ultramatrix Remote Range

- Advanced KVM IP switch
- Embedded Advanced Visual Interface (AVI) for maximum reliability
- Full serial device control
- Remote power control
- 5 Levels of Internal AVI Security
- Expands seamlessly via high density RJ45 expansion technology
