

NetBotz

NetBotz is the first network appliance designed specifically to provide early warning of conditions that lead to equipment failure. With reporting, alerts and all monitored conditions accessible via the web, management of remote locations and branch offices becomes cost effective and proactive.

NetBotz allows you to improve network reliability and availability while increasing the productivity of IT resources that are tasked with maintaining these networks. NetBotz appliances are simple, low-cost and require no additional resource development. NetBotz appliances can operate independently or as part of an enterprise management solution.

NetBotz WallBotz and RackBotz protect your IT equipment through camera-based remote viewing of server rooms, cabinets and racks while monitoring for variations in temperature, humidity, sound, and air movement through internal environment sensors.

These small, self-contained mounted devices generate HTML messages that serve as an alert mechanism to a central monitoring system located on a web-accessed browser. Users can receive information regarding unfavourable conditions of their equipment through an email or paged message.

WallBotz 500

- Next-generation NetBotz monitoring appliance
- Pod-based architecture gives the user tremendous flexibility and expandability
- Camera pods and sensor pods can be located as far as 340 feet (104 m) from the base station
- The base station can be wirelessly connected to an 802.11b wireless LAN
- The Camera Pod 120 boasts a surveillance-class camera and audio recording, with multiple resolutions up to 1280x1024 and frame rates as high as 30 fps
- The camera pod has a built in microphone

WallBotz/RackBotz 400 & 400C

- IP-addressable, integrated web server
- Standard sensors: Temp, humidity, airflow, audio, door open
- 7 external sensor ports
- Camera Enhancements software included
- Camera Motion Sensor software included
- Device Crawlers software included
- WallBotz stylish case design and swivel mount for 360° positioning
- RackBotz - IU Rackmount
- Articulating camera for 15° aiming in any direction
- Colour Camera on the WallBotz/RackBotz 400C

WallBotz/RackBotz 310 & 310C

- IP-addressable integrated web server
- Standard sensors: Temp, humidity, airflow, audio, door open
- 3 external sensor ports
- WallBotz stylish case design and swivel mount for 360° positioning
- RackBotz - IU Rackmount
- Articulating camera for 15° aiming in any direction
- Colour camera on the WallBotz/RackBotz 310C

External Sensors

NetBotz provides a range of external sensors that allow you to closely monitor your network and comms room.

The sensors that are currently available include:

● Fluid Detector

● External Temperature Sensor

● External Humidity Sensor

● External Particle Sensor

● NetBotz Amp Detectors

● Dry Contact Cable

● CCTV Pod

● Power Control Pod
